

## **Addendum: Final Act Clarification — Minions vs Antagonist Form**

This addendum clarifies terminology and narrative structure used in Page 29 to fully align the Black Baron Minions concept with the finalized antagonist form system. No new mechanics are introduced and no existing mechanics are removed.

Minions are defined as manifestations of the Black Baron's pressure during Acts 1–9. Each minion represents an indirect avatar of the Baron's will and exists only within its designated act range.

The final act (levels 90–100) does not introduce a new minion. Instead, the Black Baron transitions into his final form, known as the Architect.

## **Appendix — Canonical Minion Roster**

1. Heap Troll — Levels 1–10
2. Minotaur — Levels 11–20
3. Spider Queen — Levels 21–30
4. Cyclops — Levels 31–40
5. Sand Wyrms — Levels 41–50
6. Gorgon Queen (Medusa) — Levels 51–60
7. The Lich Aspect — Levels 61–70
8. Abyss Watcher — Levels 71–80
9. Iron Colossus — Levels 81–90

Levels 91–100 represent the final confrontation with the Black Baron in his Architect form. The Architect is not a minion and fully replaces the Minion System during the final act.
