

World of Tetris: Fragments of the Sleepless Realm

Game Design Document — Page 34

34. Canonical UI Architecture Scheme

This page defines the canonical static UI layout of the gameplay screen. The scheme below is authoritative and must not be altered without explicit canon revision.

Canonical Notes

- The **[ACT | LEVEL | TIME]** block is a dynamic placeholder populated by the game at runtime.
- No example values are displayed in the UI scheme to avoid ambiguity.
- This block represents global run progression and does not belong to either Baron or Hero panels.
